Skills

Languages & Frameworks

-  React
-  TypeScript
-  JavaScript
-  Vue.js
-  Nuxt
-  Next.js
-  React Native
-  Expo Go
-  SCSS

Backend & Data

-  Node.js
-  Express.js
-  REST API

Platforms & Tools

-  Docker
-  Git
-  GitHub
-  Azure DevOps

Summary

Software engineer with 10+ years building performant, component-driven web and mobile applications across agency, enterprise, and product environments. Strong background in React, TypeScript, and Vue.js, with fullstack reach into Node.js, PostgreSQL, and REST API integration.

Experienced leading component system architecture, cross-platform UI development, and CI/CD pipeline delivery. Comfortable owning work end-to-end — from design system decisions to deployment workflows — and collaborating closely with product, design, and engineering teams.

Experience

AbelsonTaylor

Senior Interactive Developer

2023 – 2025

- | React | TypeScript | Node.js | GitHub Actions | SCSS | CI/CD |
|---|------------|---------|----------------|------|-------|
| <ul style="list-style-type: none">· Led a front-end platform refactor, architecting a modular React/TypeScript codebase that separated the base application from presentation-specific components, enabling scalable development across multiple codebases.· Created GitHub Actions workflows from scratch, automating build, test, and deployment processes to improve reliability and delivery consistency across frontend repositories.· Developed internal developer-facing tools using React, TypeScript, and Node.js to support complex application workflows and improve team efficiency.· Improved front-end performance by reducing bundle size and optimising component rendering, delivering measurable load time improvements across user-facing applications. | | | | | |

Workflow & Methods

Component-driven
Development

Agile / Scrum

CI/CD

Cross-functional Teams

Publicis Hawkeye (*Razorfish*)
Interactive Developer
2018 – 2023

<i>Vue.js</i>	<i>TypeScript</i>	<i>Nuxt</i>	<i>Next.js</i>	<i>Braze</i>	<i>Docker</i>
· Architected a component-based design system across multiple platforms, reducing development time by 80% through reusable component architecture and standardised UI patterns. · Built enterprise applications using Vue.js, TypeScript, and Nuxt, delivering dynamic, data-driven interfaces with live data updates and API-integrated user experiences. · Designed and implemented REST API-driven campaign pipelines within the Braze platform, integrating external data sources to support personalised, automated experiences across email, in-app messaging, and push notifications. · Contributed to a Vue.js SPA deployed in a Docker/Kubernetes environment, working within an Agile team across CI/CD workflows and testing strategies.					

Solo Engineering

Fullstack Content Personalisation Platform

<i>React</i>	<i>TypeScript</i>	<i>Supabase</i>	<i>PostgreSQL</i>	<i>Claude API</i>	<i>Node.js</i>
· Designed and built a React/TypeScript SPA with a Supabase/PostgreSQL backend, featuring a sparse variant/override data model that applies audience-specific content deltas at query time, without duplicating base records. · Architected a 10+ table relational schema with Row Level Security, role-based grants, and migration-based evolution. · Built a Claude API integration to analyse structured input and generate audience-targeted content variants, implementing an AI-assisted authoring workflow alongside the manual content pipeline. · Configured a GitHub Actions CI/CD pipeline to automate build, test, and deployment workflows across the public application repository.
